Patient Information

Name

Samuel Adeyemi

Date of birth

1954-01-30

Health number

3358216749

Allergies

None known

Conditions

Type 2 diabetes, Hypertension, Neuropathy, Asthma

Current Medications (prescription, over-the-counter, and natural products)

Medication	Strength	Directions	Notes / how it is taken
Metformin	500 mg	1 tab BID with meals	Taking as prescribed
Insulin glargine	100 U/mL	22 units at bedtime	Taking as prescribed
Ramipril	5 mg	1 cap daily	Taking as prescribed
Gabapentin	300 mg	1 cap TID	Taking as prescribed
Salbutamol HFA	100 mcg	2 puffs QID PRN	
Atorvastatin	20 mg	1 tab daily at bedtime	
Hydrochlorothiazide	25 mg	1 tab daily	

Pharmacist Recommendations

Patient reports good adherence to chronic medications with no missed doses identified during review. Salbutamol use was assessed as reliever-only, suggesting stable asthma control; reinforced correct inhaler technique and the importance of carrying the reliever at all times. Reviewed insulin glargine storage, injection site rotation, and symptoms of hypoglycemia given concurrent metformin and insulin therapy. Counsellor on maintaining hydration and monitoring blood pressure with combined ramipril and hydrochlorothiazide. No drug therapy problems requiring prescriber referral were identified at this time.
